understanding and choosing binoculars

MAGNIFICATION

Determines how many times closer an object appears than with the naked eye. eg A **10x50** binocular lets you see an object 10 times larger than when seen by the naked eye.

DIAMETER

This number is the diameter size (mm) of the outer lens. The larger the number, the brighter an image appears. eg a 10x**50** binocular has a large 50mm lens that lets more light in for brighter viewing.

Tasco Fashion 8x21 **\$49 each**
